Access Forensics Portable is a free portable version of a standalone application developed by French company EurekaDat. The program, available for download through the Internet at : [www.eurekadat.fr/accessforensics/](http://www.eurekadat.fr/accessforensics/), has been designed to help users open, decrypt and extract information from the latest version of Access 2013 and later. With the program, you can open and decrypt any kind of MSAccess database and make it searchable, copy recovered data to the clipboard, save recovered data to file, or decrypt hidden data. It is compatible with most operating systems (Windows, Linux and Mac) and all the version of Access from 2013 onward. The software is portable and shouldn't slow down system performance. In addition, it doesn't require any installation and it should run without any side effects. Key features: - Open and decrypt MSAccess databases of any type - Decrypt passwords by brute force or dictionary attack mode - Find out the names of the tables in the database - Export data to files or clipboard in XML or CSV format - Extract details of the database tables - Search database content for keywords - Encrypt and decrypt databases with keys you know and information you want to hide - List files associated with a database - Open password-protected MSAccess databases - Determine the text encoding of a database - Recover the title of a picture - View Unicode fields in a database - Crack the Master Password to open an encrypted database - Copy information from the clipboard to a file - View information from the console - Open MSAccess 2013 and later databases You should be warned that Private Internet Access' business model is primarily based on selling subscriptions to customers rather than on the quality of the client-side software. This means you will not necessarily get the best experience possible or access to all features if you subscribe. Filemaker, a major competitor to MS Access, has introduced a powerful new database app for Mobile users (Windows/Mac) with Filemaker Go. As you'd expect with a new Filemaker offering, Filemaker Go comes with a stunning interface, featuring a slick design with polished tiles and a sidebar. The addition of a sidebar is a breath of fresh air to me because it forces you to organize your data by folders instead of only by apps, documents, or media items (which, quite frankly, doesn't exist in Filemaker Go). Filemaker Go is designed to be used
