Apply the numbers to the plane. Save the project. Open the project with the keygen. The generated file is a pdf with some commands in it and the “scaling” (a word that appears a few times in the instructions) is done by changing the value of the variable. You do this by selecting the variable in the Project window. Here is an example of the pdf file: About the author: Chris Limam is a co-founder and a member of the Autodesk Developer Community.
