As you can see, I've used the following regex to try to capture the text I want: ([A-Z]{2})|([A-Z]*?)) Now I need to figure out how to get the last name out of that. A: Here is the general "rule" to extract a value from the text: Start by extracting characters from the beginning up until the first occurrence of some delimiter. Extract the value of all groups from the remainder of the string (if there are more than one). Here's a Python implementation: regex = '([A-Z]{2})|([A-Z]*?)' matches = re.finditer(regex, s, re.M) first_name = next(m for m in matches if m.start() == 0).group() last_name = next(m for m in matches if m.start() > 0 and m.end() == len(s)).group() Note that the code returns the first and last names as a single string, instead of separate values. Adaptations of the inferior olive in cerebellar ataxia. 1. The inferior olive in ataxic patients had more neurons than in normal subjects, with an increase in the number of dentate and parvocellular olivary neurons, but no difference in the number of olive cells. 2. Quantitative morphometric analysis showed that size of both the principal and accessory olive did not differ significantly in ataxia. 3. The ataxic patients showed no significant change in the olivo-cortical and olivo-nuclear fiber ratio. This is consistent with the electrophysiological finding that the responses of inferior olivary neurons to excitatory stimulation are within the normal range., most of which is concentrated in the region in the middle of the

gland (area B), with very little concentrated at the gland periphery (area A) (Fig. 2). The opposite pattern of phenotype inheritance was observed for the *CROT* gene. The first allele of *CROT* was located at the most proximal end of the gland, and its expression was not affected by the *CROT* mutation (Fig. 3). This finding confirmed that this mutation was not a modifier gene for *CROT*. In conclusion, the unique distribution of the GK

Thanks. A: You can try using this. import requests from bs4 import BeautifulSoup from pprint import pprint page = requests.get('') soup = BeautifulSoup(page.text, 'html.parser') result = soup.select('#maindiv') for item in result: pprint(item) June 15, 2018 – League Commissioner Todd Grishaw released the following statement regarding the expulsion of the Charlotte Independence and the resignation of the head coach and several players: "As of today, we have received a formal complaint that the Charlotte Independence have participated in the use of performance-enhancing drugs in violation of the 2017 USL Player Code of Conduct and the 2018 USL Anti-Doping and Anti-Dissidence Policy. "We have also received allegations that Charlotte Independence Head Coach Mike Jeffries and several players have directly communicated with anti-doping agencies in connection with this matter. "The USL is committed to upholding a fair and transparent playing environment, as well as consistent application of the USL Player Code of Conduct and USL Anti-Doping and Anti-Dissidence Policy. "The Commissioner is committed to applying the fundamental principles of fairness, equality and due process when handling all allegations of potential player misconduct. Because it is alleged that public statements have been made in this matter, the matter is being investigated by a Special Deputy Commissioner independent of the League office. "The League will provide the Independence with due process, and will take whatever action is deemed appropriate once all the facts of the matter are known."Q: How to work on ground of a terminal where rotational bar is not fixed in any position? Suppose we have a terminal with rotational bar that is not being fixed in any position, then how to estimate $\cos(\theta)$? A: Since the rotational bar is

not fixed in position, we should convert the given problem into a two-bodies problem. \begin{align*} & 6d1f23a050
